

LEGAL EASE

AI-Powered Legal Document Generator

Smart • Fast • User Friendly

Project Presentation

A web-based system that helps users collect details, generate structured legal documents with AI, review the output and download a PDF.

Prepared for academic project demonstration

Why Legal Ease?

The project addresses common difficulties in preparing structured legal documents manually.

Manual Preparation

Legal documents can require repeated typing, formatting and checking of user details.

Time & Effort

Preparing a document from scratch can be tedious, especially when similar fields are entered repeatedly.

Output Management

Users need a convenient way to preview, edit, save and download the final document.

THE IDEA

Turn a simple user-input flow into a structured legal-document workflow using a web interface, AI generation, preview/editing and PDF output.

USER INPUT

PDF OUTPUT

Project Objectives

What Legal Ease is designed to achieve.

01

Generate legal documents quickly

Convert collected details into a structured document.

02

Reduce manual effort

Minimize repetitive preparation and formatting work.

03

Keep the interface simple

Use a clear, guided flow for users.

04

Enable preview & editing

Allow users to review and modify generated content.

05

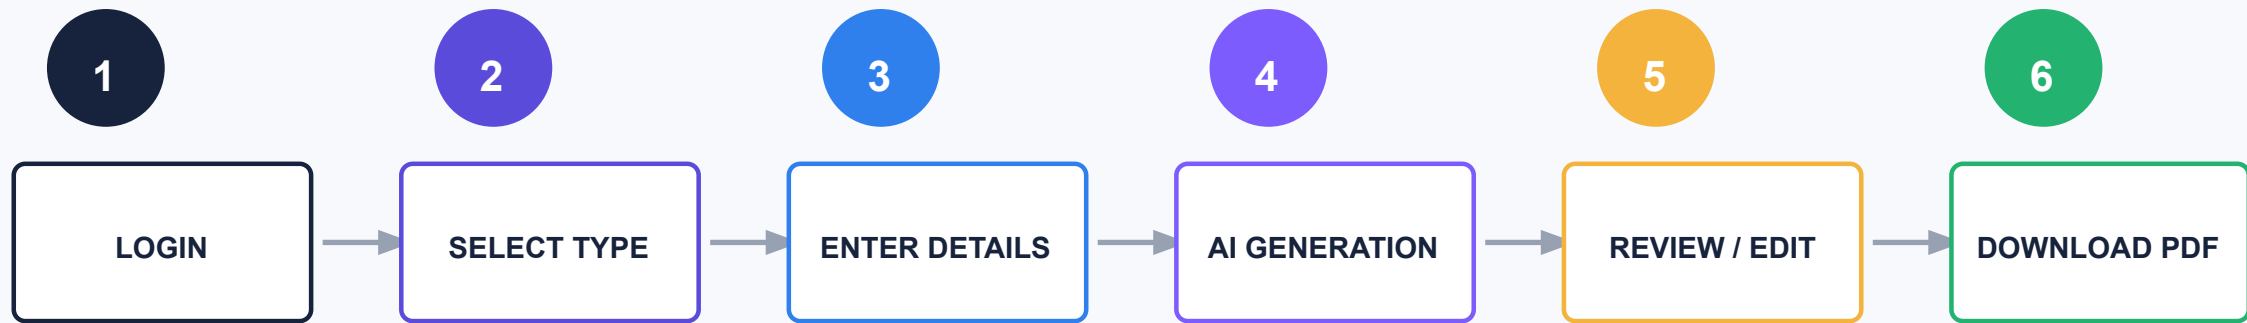

Provide convenient output

Support PDF download and document history.

Goal: a faster, clearer document-creation experience

System Workflow

The user journey from login to a downloadable document.

USER → DATA → AI → DOCUMENT → PDF

Each stage is designed to keep the process guided and easy to follow.

Key Features

Main user-facing capabilities included in the project.

01**LOGIN**

Registration & secure sign-in

02**DOC TYPE**

Select the required legal document

03**DETAIL FORM**

Dynamic fields based on document type

04**AI GENERATION**

Generate structured content with AI

05**PREVIEW**

Read the generated document before saving

06**EDIT**

Modify generated content when needed

07**PDF**

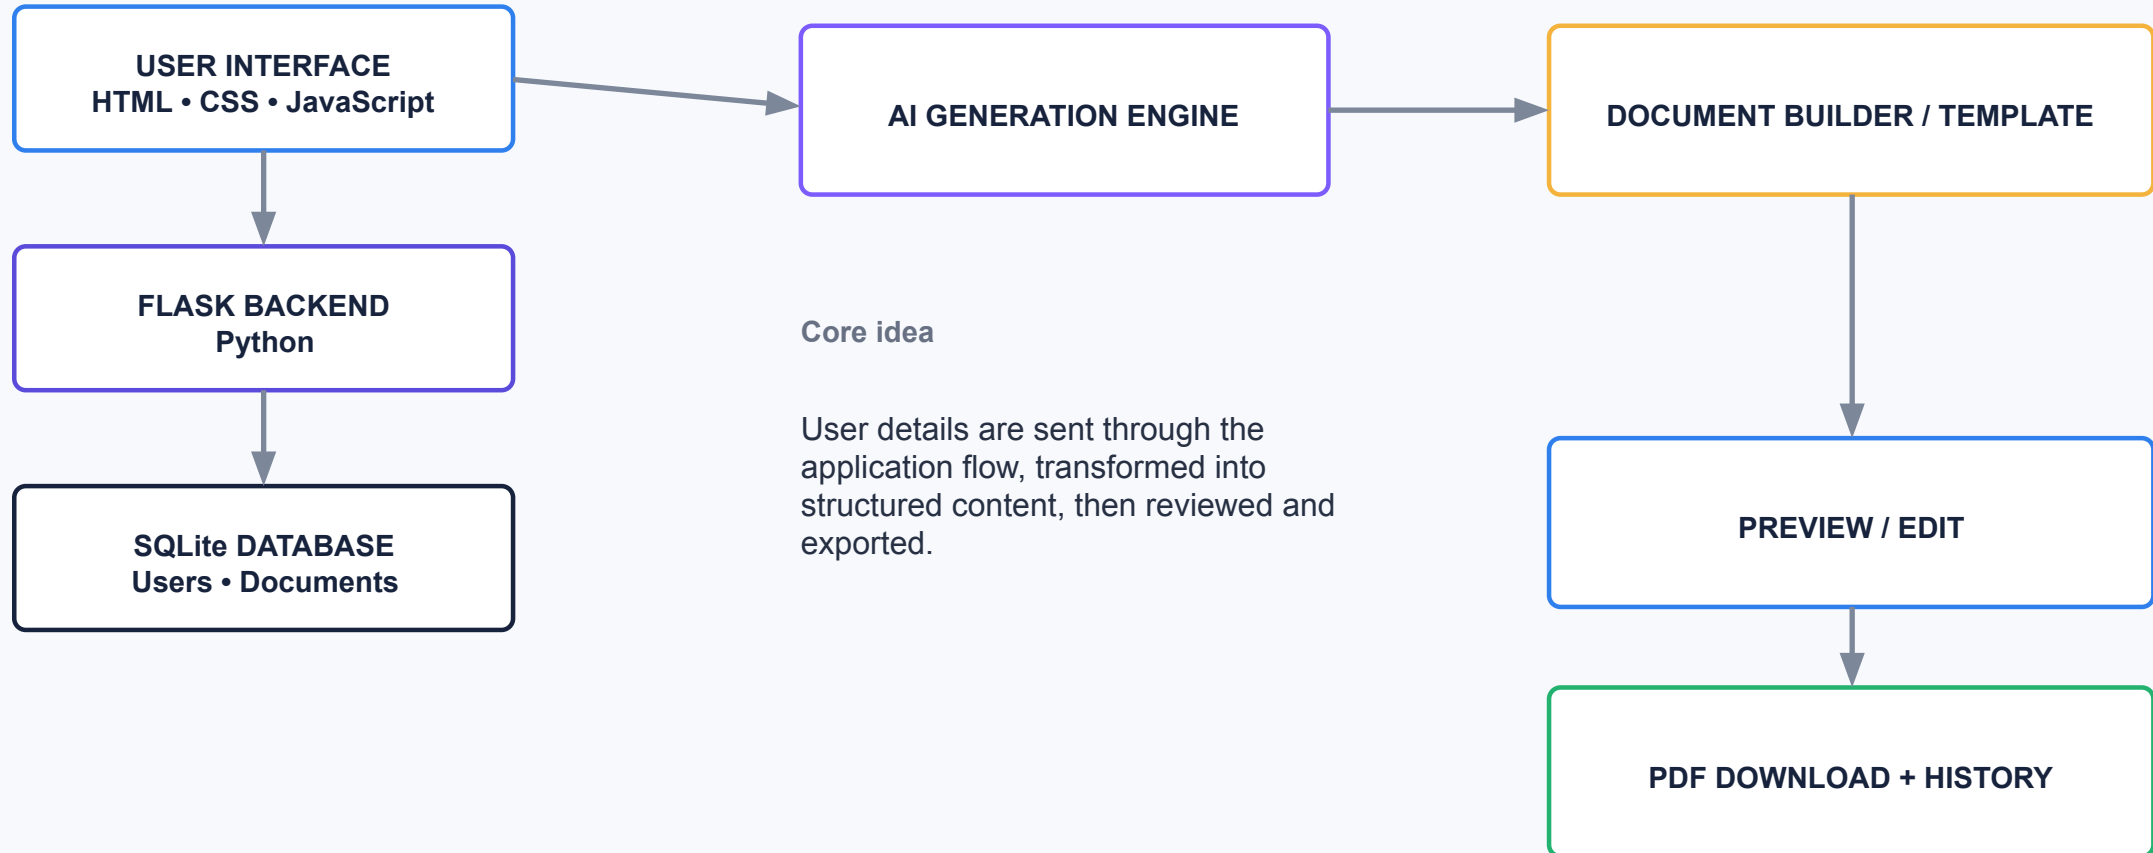

Download the final document

08**HISTORY**

Keep track of generated documents

System Architecture

High-level interaction between the user interface, Flask backend, AI layer and SQLite storage.

Technology Stack

Technologies used to build and run the application.

Frontend	HTML • CSS • JavaScript	User interface and interactions
Backend	Python • Flask	Application routes and server logic
Database	SQLite	Stores user and document information
AI Layer	AI-based generation	Creates structured document content
Development	GitHub Codespaces	Cloud development environment

Stack summary: web UI + Flask backend + SQLite + AI generation

System Modules

The project is organized into focused functional components.

01

Authentication

Registration and login

02

Document Selection

Choose the legal document type

03

Details Collection

Collect document-specific inputs

04

AI Generation

Create the document content

05

Preview & Edit

Review and modify output

06

Download & History

Save, download and track documents

Advantages & User Experience

Benefits are supported by a simple, guided application flow.

TIME

Faster preparation

EFFORT

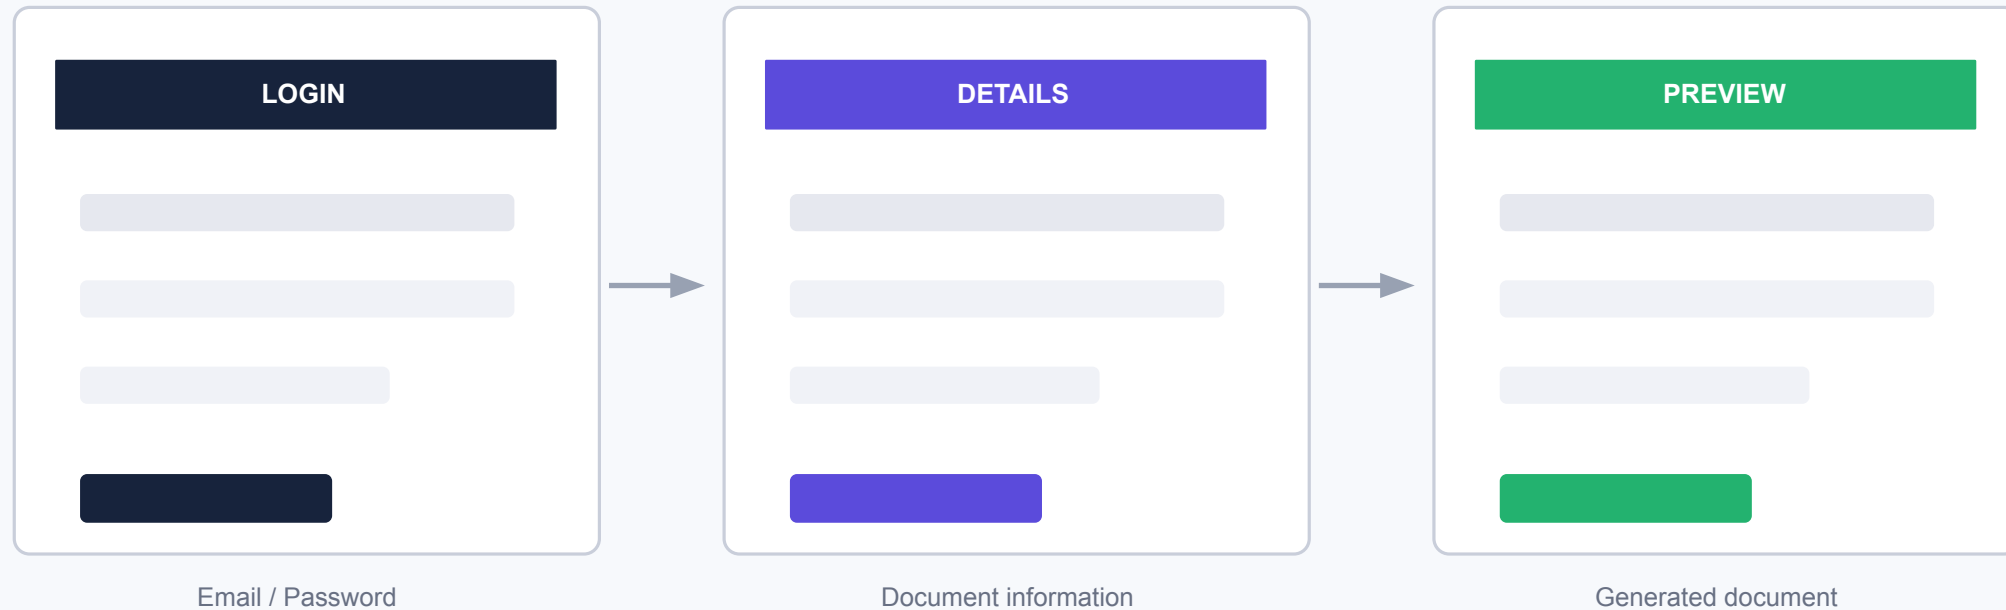

Less manual work

EDIT

Review before download

HISTORY

Previous documents can be tracked

Future Enhancements & Conclusion

Possible next steps and the project takeaway.

FUTURE ENHANCEMENTS

- ✓ Support more types of legal documents
- ✓ Improve AI-generated document accuracy
- ✓ Add multilingual document generation
- ✓ Enable secure cloud storage and sharing
- ✓ Provide an advanced user dashboard

CONCLUSION

Legal Ease combines web technologies, Flask, SQLite and AI to simplify legal document creation.

The workflow supports user input, structured AI generation, review/editing, PDF output and document history.
